

Education

B.S. Computer Science | Minor Financial Technology | Human Factors Certificate

UNIVERSITY OF UTAH

Expected May 2027

Salt Lake City, UT

Relevant Coursework: Probability & Statistics, Data Structures, Algorithms, Database Systems

Skills

Data Science & Programming: Python (Pandas, NumPy), R, SQL (MySQL, PostgreSQL), Apache Spark, Excel, Jupyter Notebooks, Salesforce, SQL Server, SSMS, HTML/CSS

Statistical Methods: Logistic Regression, Predictive Modeling, Exploratory Data Analysis, Probability & Statistics

Administration & Outreach: Event Coordination, Alumni Relations, Front Office Support, Conflict Resolution, Team Leadership

Languages: Arabic (Fluent), English (Fluent)

Experience

Data Analytics & University Engagement Intern – COS Dean's Office

April 2026 – Present

University of Utah internship – Salt Lake City, Utah

- **Engineering a Python and SQL data pipeline** to aggregate and standardize siloed university data across departments and platforms, making previously fragmented institutional information accessible and usable in one place.
- Conducting targeted outreach to new and existing high school partners to **expand the College of Science's recruitment pipeline**, and coordinating residential student programming events in partnership with Housing.

Alumni Chapter Event Intern – Data Science and Engagement

September 2025 – December 2025

University of Utah Internship – Salt Lake City, Utah

- **Managed and cleaned large alumni datasets** (engagement logs, donation records, and demographic data) using **R and Excel**, ensuring data quality for downstream statistical analysis.
- **Conducted logistic regression modeling** to evaluate the relationship between event attendance and donation likelihood, and supported on-site coordination and engagement for Alumni Chapter events.

Student Services Manager – Management and Planning

August 2023 – December 2024

UAC – Incheon, South Korea

- Served as **primary point of contact** for student and assistant inquiries, resolving issues and delivering high-level customer service to a diverse campus community while fostering a positive, collaborative environment.
- Led **planning and execution of large-scale community events**, driving increased student participation through targeted outreach and collaborative programming.

Projects

Model Efficiency after Automatic Data Cleaning

Spring 2026

Python, Apache Spark, HoloClean, Docker, SQL, Scikit-learn, XGBoost

- **Built a full ML benchmarking pipeline** to quantify the downstream impact of automated data cleaning, ingesting a **14.6M-row housing dataset (2.26GB)** via Apache Spark and injecting controlled string corruption across five categorical columns.
- **Repaired corrupted data using HoloClean** against a PostgreSQL backend, measuring a **25% R² improvement** for Linear Regression and a **17% F1 improvement** for Logistic Regression, with the full pipeline reproducible via Docker Compose..

College of Science Student Resource Guide

Spring 2026 – Present

Python, BeautifulSoup, React, TypeScript, Vite, GitHub Pages

- **Web scraped 10+ University of Utah sites** department pages, scholarship portals, and union sites using Python (BeautifulSoup, Requests), structuring the extracted data into a TypeScript data file powering a React + Vite app deployed on GitHub Pages.
- **Built a centralized, searchable resource hub** for College of Science students, consolidating academic advising, wellness, scholarships, and research opportunities into one publicly accessible platform.
